

Pharazyn Reserve rabbit control – June 2024

Greater Wellington Regional Council and Kāpiti Coast District Council will be undertaking a rabbit control operation at Pharazyn Reserve on Rutherford Drive, from 5 June 2024.

The operation is to help protect native plants in this sensitive environment. Bait known as Pindone poison will be applied to carrot and died green. This is an effective control method for rabbits in this area.

Pindone carrot will be applied directly to the ground within fenced areas.

Dogs must be kept on lead in this area. Please keep to the tracks in the treated areas and avoid contact with the bait or animal carcasses. Signage will be erected at main entry points along the walkway and on fencing.
