Methodological notes on economic prosperity indicators

for Kapiti Coast District Council

August 2017

Introduction

This document accompanies the economic prosperity infographics for each of the area units in the Kapiti Coast district. The infographics measure economic prosperity across five domains and provide an overall summary score.

Methodology

Each domain contains several indicators which draw on a wide range of data sources and have different units of measurement. The value of each indicator is 'normalised' so that the values range from 0 to 10. A score of 10 indicates a strong outcome and 0 a weak outcome. By giving each indicator equal weighting, we estimate an overall score (from 0 to 10) in each domain for each area unit. Kapiti Coast as a whole is scored as if it is an area unit.

The overall score for each area unit is an equally-weighted average of the individual scores for each of the five domains. An area unit with a higher score is considered to have greater economic prosperity.

Data sources

The following table sets out the variables used for each domain, the time period they relate to, their source, and any explanatory notes.

Indicator	Reference period	Source	Notes
Skills & Labour Force			
Proportion of 24-34 year olds with NCEA level 4 or above	Calendar year 2015	Education Counts, Ministry of Education	
Proportion employed in highly skilled jobs	Average for the year to March 2016	Infometrics	Highly skilled jobs are defined as jobs with skill level 1 in the Australian New Zealand Standard Classification of Occupations.
Connectedness			
Average commute time to work	Place of work and place of residence as at March 2013. Commute times at August 2017.	Census and Google Maps	The place of work (area unit) and place of residence (area unit) of each employed person was identified from the census. Using Google Maps the commute time of each person was measured (from centroid to centroid).
Average commute time to closest metropolitan centre	Place of residence as at March 2013. Commute times at August 2017.	Census and Google Maps	The place of residence (area unit) of each person was identified from the census. Using Google Maps the commute time of each person was measured (from centroid of area unit of residence to centroid of metropolitan).

Average commute time to Wellington by train (one way)	Place of residence as at March 2013. Commute times at August 2017.	Census and Google Maps	The place of residence (area unit) of each person was identified from the census. Using Google Maps the nearest train station was identified (either Waikanae, Paraparaumu or Paekakariki) and journey time calculated by car. The length of the train ride to Wellington was then estimated.
Proportion of people with access to the internet at home	As at March 2013	Census, Statistics New Zealand	
Demography			
Population growth	Year to June 2016	Regional Population Estimates, Statistics New Zealand	
Dependency ratio 2016	Year to June 2016	Regional Population Estimates, Statistics New Zealand	Dependency ratio is the number of working age people (15 to 64 years of age) expressed as a proportion of the non-working age population (0-14 years and 65 years and over).
Dependency ratio 2026	Year to June 2016	Sub-national population projections, Statistics New Zealand	
Economic quality			
Self-employment rate	As at March 2013	Census, Statistics New Zealand	
% employed in knowledge intensive industries	Average for the year to March 2016	Infometrics	Knowledge-intensive industries are industries that satisfy two criteria: at least 25 per cent of the workforce must be qualified to degree level and at least 30 per cent of the workforce must be employed in professional, managerial, as well as scientific and technical occupations.
% employed in declining industries	Average for the year to March 2016	Infometrics Regional Employment Forecasts	Declining industries are defined as industries in which employment in Kapiti is forecast to decline by more than 5% between 2016 and 2021.

Household prosperity			
Median household income	As at March 2013	Census, Statistics New Zealand	
Unemployment rate	As at March 2013	Census, Statistics New Zealand	
% of working age population that are beneficiaries	As at March 2017	Ministry of Social Development	The working age population are aged 15-64 years.
Rental affordability	As at March 2013	Census, Statistics New Zealand, MBIE rental data	Rental affordability is measured by annual rent as a proportion of median annual household income.
Housing affordability	As at March 2013	Census, Statistics New Zealand, QVNZ	Housing affordability is measured as the ratio of rateable housing capital values to median annual household income.

Economic Prosperity in Kaitawa

This infographic presents an assessment of economic prosperity in Kaitawa.

Economic prosperity is measured across five domains. In each domain, we score the area unit out of ten and compare it to the Kāpiti Coast average. The average of the five scores gives an overall measure of prosperity. A brief explanation of the domains and the method to calculate a score in each domain is given in an accompanying document.

Overall Economic Prosperity Index

With an overall score of 6.7 Kaitawa has considerably higher economic prosperity than the Kāpiti Coast average of 4.6.

Kaitawa outperforms the Kāpiti Coast average in the following domains:

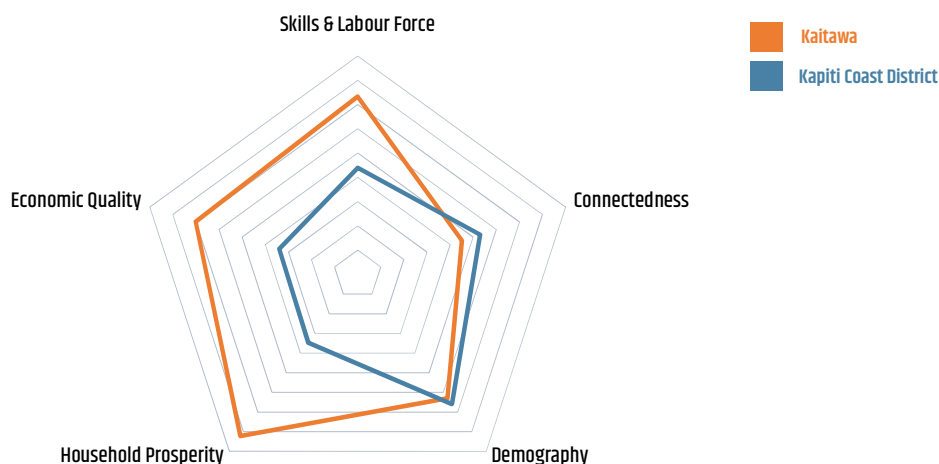

Skills & Labour Force Household Prosperity Economic Quality

Kaitawa underperforms the Kāpiti Coast average in the following domains:

Connectedness Demography

Economic Prosperity Scores by Domain

Closer to outer edge is better

Skills & Labour Force

This domain measures the qualifications that individuals possess and their success in obtaining highly skilled jobs.

Skills & Labour Force indicators ranked from Kaitawa's best to worst

Indicator	Score out of 10 (higher = better)		Value
Proportion employed in highly skilled jobs		7.9	54%
		3.7	44%
Proportion of 24-34 year olds with NCEA level 4 or above		6.7	60%
		5.1	54%

 Kaitawa  Kapiti Coast District

Connectedness

This domain measures access to infrastructure and services to take advantage of employment, education and business opportunities across the Wellington region and beyond.

Connectedness indicators ranked from Kaitawa's best to worst

Indicator	Score out of 10 (higher = better)		Value
Proportion of people with access to the internet at home		10.0	91%
		5.1	78%
Average commute time to closest town centre (minutes)		4.7	8
		5.9	7
